REVIEW

EUDR BRIDGE / CARBONPROOF

evidence.aidealt.global

contact@aidealt.global

Two products. Clearer evidence.

Independent software for two distinct regulatory needs.

01 EUDR Bridge

Coffee importers and Brazilian suppliers

Collect the Brazilian supplier evidence your EUDR process depends on. One intake link in Portuguese, without a supplier account.

- 01 Request shipment evidence
- 02 Collect farms and plots
- 03 Track missing items and remind
- 04 Export the evidence package

02 CarbonProof

Industrial installations and CBAM advisers

Connect industrial reporting values to the records behind them. Prepare a frozen period pack and a controlled handover for your verifier.

- 01 Define installation and period
- 02 Link values to original sources
- 03 Freeze snapshot and hashes
- 04 Share an expiring verifier room

AIDEALT organises evidence. Legal assessment, accredited verification and submission remain with qualified professionals.

Architecture and trust controls

Documented implementation controls, not independent certifications.

1

WORKSPACE ACCESS

Authenticated accounts. The application verifies identity and workspace ownership on the server before returning customer data.

2

EVIDENCE STORAGE

Private Supabase buckets. Access to stored files is granted through the application for an authorised workspace or a valid scoped sharing link.

3

PRIMARY HOSTING

Application on Render in Frankfurt. Database and private evidence storage on Supabase in Frankfurt. Public marketing pages on Cloudflare's global network.

4

TRANSPORT

HTTPS for public pages, application traffic and external service connections.

5

SUPPLIER INTAKE

EUDR supplier links are scoped to a request. Suppliers can answer in Portuguese without an account. Treat an intake link as confidential.

6

VERIFIER HANDOVER

CarbonProof rooms use expiring, revocable links with a maximum lifetime of 30 days. The product stores a hash of the room token. Anyone with a valid link can access that room.

7

RECORD INTEGRITY

CarbonProof hashes original uploads with SHA-256, links values to source references and locks a reporting period when its snapshot is frozen.

8

PORTABILITY

Evidence packages can be exported. CarbonProof export includes a snapshot, manifest and original documents within the package limit.

CURRENT LIMITATIONS

Free hosting without contractual SLA, enterprise SSO or SCIM. Critical use requires agreed backup, restore, retention and support terms. No ISO 27001 or SOC 2 claim.

Plans and pilot options

Prices in euros. Stripe Checkout confirms applicable taxes.

14-DAY PILOT · NO CARD

EUDR: 3 active suppliers. CarbonProof: 1 installation, 1 period and 30 MB.

EUDR Bridge

Founder 20 active suppliers	EUR 79 / month
Importer 100 active suppliers	EUR 129 / month
Partner 500 active suppliers	EUR 249 / month

CarbonProof

Verification Cycle 1 installation · 1 reporting period	EUR 299 / once
Plant 1 installation · 12 reporting periods	EUR 199 / month
Partner 5 installations · 60 reporting periods	EUR 599 / month

CarbonProof storage and period caps are totals, not monthly renewals. Review the full plan terms before purchasing.

Supplier due-diligence overview

For procurement, security, legal and compliance teams.

WHAT WE CAN DEMONSTRATE

- One shared application infrastructure for EUDR and CarbonProof.
- Original documents in private buckets, organised by workspace.
- CarbonProof sample uses synthetic data, not an official report.
- Stripe Checkout and signed payment events with reconciliation logic.
- Software capabilities distinct from regulatory responsibilities.

RECORDED VALIDATION

History: 38 automated tests and 24 production checks with synthetic data. No real payments, verified customer-mailbox delivery or independent security audit.

BEFORE MISSION-CRITICAL USE

Agree on SLA, continuity, tested backup/restore, DPA, retention, support and usage limits in a separate written contract.
